

## Satellite Imagery

*Gain access to powerful satellite imagery of your project from space*

- Create custom photographs of your jobsite from commercial satellites
- Economical way to review and inspect remote sites and large areas
- Coverage is up to 100 sq kilometers (38.6 sq miles) per pass
- High positional accuracy for far-reaching projects
- Allocate staff appropriately per construction site
- Secure & easy-to-use

EarthCam utilizes satellites to map, monitor and measure the entire scope of any engineering or infrastructure project from 0.5-meter resolution imagery. The 0.5-meter resolution imagery is so accurate that it discerns an object on the ground approximately 16 inches in size using both multispectral imagery and panchromatic imagery.

*1-meter resolution*

*0.5-meter resolution*

View the entire scope of any engineering or infrastructure project from 1-meter and 0.5-meter resolution imagery.

*Burj Khalifa Building, Dubai*

*Scan to learn how easy it is to put this powerful technology to work for you.*
